The Large Cap Institutional Equity composite includes all fully discretionary accounts invested in the Large Cap Institutional strategy. The strategy seeks long-term growth of capital. The strategy typically invests in large capitalization stocks that have optimal risk/return profiles according to their Q Score. The proprietary Hanseatic Q Score is a dynamic quantitative analytic for identifying strong market performers. The strategy will be at least 95% invested in equities at all times. On May 31, 2014 the composite name was changed to Large Cap Institutional Equity. Prior to May 31, 2014 the composite was known as the Large Cap Equity. Hanseatic Management Services, Inc. time-weights all cash flows on the day the cash flows actually occur for institutional clients and the day of notification for private clients. Composite performance is presented gross of foreign withholding taxes on dividends, interest income, and capital gains. Withholding taxes may vary according to the investor's domicile. Composite returns represent investors domiciled primarily in the United States. Past performance is not indicative of future results.

Returns are presented gross and net of management fees and include the reinvestment of all income. Net of fee performance was calculated using actual management fees. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request.

The investment management fee schedule for the composite is 1.25% on \$0 to \$1 million, 0.60% on \$1 to \$10 million, 0.55% on \$10 to \$25 million, 0.50% on \$25 to \$50 million, and 0.45% on amounts greater than \$50 million. Actual investment advisory fees incurred by clients may vary. Minimum account size to be included in the composite is \$50,000.

The three-year annualized standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period. The standard deviation is not presented for 2010-2012 because there is not 36 consecutive calendar months of performance. The annual composite dispersion presented is an asset-weighted standard deviation calculated for the accounts in the composite the entire year.
